

Application No. 10/016,765
Reply to Office Action of December 29, 2009 and
the Advisory Action of March 18, 2010

IN THE CLAIMS

Please amend the claims as follows:

Claim 1 (Currently Amended): An information processing system, comprising:

a recording apparatus;

a personal computer configured to (1) directly access a remote program information providing server through the internet based on a user request directly input to the personal computer by the user to obtain recording data for recording of a program from the remote program information providing server access and (2) to directly access the recording apparatus to set recording of the program by the recording apparatus based on the obtained recording data;

an information processing apparatus comprising:

control means including,

a user controlled mobile telephone or personal digital assistant for acquiring, without accessing the personal computer or the recording apparatus, control information for controlling preset recording of a program by accessing a remote program information providing server through the internet based on a user request to access the remote program information providing server, [[and]]

conversion means for converting contents described in said control information acquired by said mobile telephone or personal digital assistant into code information for setting said program preset recording to the recording apparatus, which is remote from the control means[[;]], and

transmission means for receiving said code information from said conversion means and for transmitting said code information obtained by said conversion means directly to said recording apparatus under control of said control means;

wherein the recording apparatus receiving receives said code information from said transmission means, confirming confirms whether said code information properly sets said program preset recording, and displaying displays whether said program preset recording is proper or improper.

Claim 2 (Currently Amended): An information processing apparatus system according to claim 1, wherein said code information acquired by said acquisition means is G-code[,] information.

Claim 3 (Currently Amended): An information processing apparatus system according to claim 1, wherein said transmission means transmits said code information to said recording apparatus by use of an infrared signal.

Claim 4 (Currently Amended): An information processing apparatus system according to claim 1, wherein said control information includes broadcast channel information, broadcast date, broadcast start time, and recording end time of said program.

Claims 5-6 (Canceled).

Claim 7 (Currently Amended): An information processing system, comprising:
a recording apparatus;
a personal computer configured to (1) directly access a remote program information providing server through the internet based on a user request directly input to the personal computer by the user to obtain recording data for recording of a program from the remote

program information providing server and (2) to directly access the recording apparatus to set recording of the program by the recording apparatus based on the obtained recording data;

an information processing apparatus comprising:

a controller configured to,

under user control acquire control information through a mobile telephone or personal digital assistant, without accessing the personal computer or the recording apparatus, for controlling preset recording of a program by accessing a remote program information providing server through the internet based on a user request to access the remote program information providing server, and

convert contents described in said acquired control information into code information for setting said program preset recording to a remote recording apparatus separate from the controller[[;]], and

a transmitter configured to receive said code information from said controller and to transmit said received code information directly to said recording apparatus under control of said controller;

wherein the recording apparatus receiving receives said code information from said transmission means, confirming confirms whether said code information properly sets said program preset recording, and displaying displays whether said program preset recording is proper or improper.

Claim 8 (Previously Presented): An information processing apparatus according to claim 7, wherein said code information acquired by the controller is G-code information.

Claim 9 (Previously Presented): An information processing apparatus according to claim 7, wherein said transmitter transmits said code information to said recording apparatus by use of an infrared signal.

Claim 10 (Previously Presented): An information processing apparatus according to claim 7, wherein said control information includes broadcast channel information, broadcast date, broadcast start time, and recording end time of said program.

Claim 11 (New): An information processing apparatus configured to be used in an information processing system including a recording apparatus, and a personal computer configured to (1) directly access a remote program information providing server through the internet based on a user request directly input to the personal computer by the user to obtain recording data for recording of a program from the remote program information providing server access and (2) to directly access the recording apparatus to set recording of the program by the recording apparatus based on the obtained recording data, the information processing apparatus comprising:

control means including,

a user controlled mobile telephone or personal digital assistant for acquiring, without accessing the personal computer or the recording apparatus, control information for controlling preset recording of a program by accessing a remote program information providing server through the internet based on a user request to access the remote program information providing server,

conversion means for converting contents described in said control information acquired by said mobile telephone or personal digital assistant into code

information for setting said program preset recording to the recording apparatus,
which is remote from the control means, and

transmission means for receiving said code information from said conversion
means and for transmitting said code information obtained by said conversion means
directly to said recording apparatus under control of said control means.

Claim 12 (New): An information processing system according to claim 11, wherein
said code information acquired by said acquisition means is G-code information.

Claim 13 (New): An information processing system according to claim 11, wherein
said transmission means transmits said code information to said recording apparatus by use of
an infrared signal.

Claim 14 (New): An information processing system according to claim 11, wherein
said control information includes broadcast channel information, broadcast date, broadcast
start time, and recording end time of said program.
